

**Communication note**

**15 April 2021: details of the SDAC webinar on the implementation of the DE-AT-PL-4M MC (Interim Coupling) Project**

The DE-AT-PL-4M MC project, aims to connect the borders of 4M MC with the Multi-Regional Coupling (MRC) by introducing Net Transmission Capacity based (NTC-based) implicit capacity allocation on six borders (PL-DE, PL-CZ, PL-SK, CZ-DE, CZ-AT, HU-AT). The launch of the project is targeted for 10 June 2021. It will mark the transition to a single coupled auction for the day-ahead market across the countries covered by MRC and 4M MC. Against that background, the project represents a milestone for the completion of the European Single Day-Ahead Coupling (SDAC)

NEMOs and TSOs will arrange a webinar to provide market participants with detailed information about the expected changes and the member tests scheduled for the second half of May.

**The webinar will be held on 21 April 2021 from 14:30 till 16:30.**
